                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                     The invention comprises a protein which contains an immunogenic portion of a breast antigen. The invention also comprises breast antigen-related DNA sequences. The protein of the invention is useful as a vaccine for inhibiting the development of breast cancer. The protein of the invention is used in adoptive immunotherapy for the treatment of cancer, and a perient. The present amino acid sequence represents a duministered to a patient. The present amino acid sequence represents a human breast antigen protein of the invention

The invention relates to an isolated breast tumour polynuclectide and the polypeptide it encodes. The polynuclectide and polypeptide are useful for phetecting the presence of breast cancer in a patient, and in pharmaceutical compositions for treating breast cancer. The sequences are useful for stimulating an immune response in a patient and can therefore detecting in production of vaccines. The sequences are also useful for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with a composition of the invention and detecting the amount of polynucleotide that hybridizes to the sample. This sequence represents a human breast tumour polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       241 QKLFQLQSKNMMLQQQLVHAHKKADNKSKITIDIHFLERKMQHHLLKEKNEEIFNYNNHL 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel breast cancer polynucleotides and polypeptides encoded by the polynucleotides, useful for detecting the presence of breast cancer in a patient, and in pharmaceutical compositions, for treating breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EKNAEL OMTIKIKEESLIKRAS OYSGOLKVLIAENIMITSKIKEKODKEILEAEIESHHP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated breast cancer-associated polypeptide. The polypeptide may be used for the diagnosis and treatment of breast cancers. The methods are useful for detecting the presence of scancer in a patient and treating a cancer in a patient. The present sequence represents the amino acid sequence of a human breast cancer-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          An isolated oncogenic polypeptide useful for preventing, diagnosing and treating breast cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises a method of stimulating and/or expanding T cells specific for a tumour protein. The invention further comprises human nucleic acids and proteins that are associated with tumours (e.g. breast cancer). The method and sequences of the invention are useful for stimulating and/or expanding T cells specific for a tumour protein, detecting the presence of cancer, stimulating an immune response in a patient and treating breast cancer. The present amino acid sequence represents a human tumour-related protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

The polymuclectide, its pulyapetide, its antibody, a pharmaceutical composition comprising the fusion protein or the polymuclectide encoding it, a vaccine comprising the fusion protein or the polymuclectide encoding it, an isolated T cell population comprising T cells specific for a breast tumour protein, and a method for removing tumour cells from a biological sample is useful for inhibiting the development of a cancer in a patient. The polypeptide is

useful for stimulating and/or expanding T cells specific for a breast tumour protein. Stimulating and/or expanding T cells specific for a breast tumour protein is useful for inhibiting the development of a cancer in a patient. The method additionally involves the step of cloning at least one proliferated cell and then administering the cloned T cells to the patient. The present sequence represents a breast cancer protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EKNAELOMTLKLKEESLTKRASQYSGQLKVLIAENTWLTSKLKEKODKEILEAEIESHHP 120

acide that encode them, including immunogenic fragments of the proteins. Also included are expression vectors expressing the proteins, transformed cells and antibodies raised against the proteins or an antigen presenting cell expressing the protein. The proteins and nucleic acide may be used in the prevention, diagnosts and treatment of diseases associated with inappropriate breast tumour protein expression, i.e. breast tumours and breast cancer e.g by gene therapy. The nucleic acide and their and quantitate the presence of similar nucleic acide in samples, and therefore which patients may be in need of restorative therapy. The proteins, nucleic acide and antibodies may be used in assays to identify
                                                                                                                                                                                                                                                                                                                            modulators (e.g. antagonists) of breast tumour protein expression and activity. The antibodies and antagonists may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)) and in other immunotaristion diagnostic techniques. The present sequence is a breast tumour protein encoded by a CDNA from a breast tumour cDNA library isolated by subtractive hybridisation against a normal breast CDNA
                                                               The invention relates to isolated breast tumour proteins and nucleic

The invention relates to an isolated breast tumour polynucleotide and the polypeptide it encodes. The polynucleotide and polypeptide are useful for detecting the presence of breast cancer in a patient, and in pharmaceutical compositions for treating breast cancer. The sequences are useful for stimulating an immune response in a patient and can therefore be used in production of vaccines. The sequences are also useful for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with a composition of the invention and detecting the amount of polynucleotide that hybridizes to the sample. This sequence represents a human breast tumour polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises a method of stimulating and/or expanding T cells specific for a tumour protein. The invention further comprises human nucleic acids and proteins that are associated with tumours (e.g. breast cancer). The method and sequences of the invention are useful for stimulating and/or expanding T cells specific for a tumour protein, patient and treating breast cancer. The present amino acid sequence represents a human tumour-related protein

The polypeptide may be used for the diagnosis and treatment of breast cancers. The methods are useful for detecting the presence of cancer in a patient and treating a cancer in a patient. The present sequence represents the amino acid sequence of a human breast cancer-associated polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

```
The invention relates to isolated breast tumour proteins and nucleic acids that encode them, including immunogenic fragments of the proteins. Also included are expression vectors expressing the proteins, transformed cells and antibodies raised against the proteins or an antigan presenting cell expressing the protein and antibodies raised against the proteins and anticapen presenting cell expressing the protein. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate breast tumour protein expression, i.e. breast tumours and breast cancer e.g by gene therapy. The nucleic acids and their complements may also be used as DMA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and quantitate the presence of similar nucleic acids in samples, and confidence with a nucleic acids and antibodies may be used in assays to identify modulators (e.g. antagonists) of breast tumour protein expression and activity. The antibodies mad antibodies may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)) and in other immunocorpus tumour protein encoded by a cDNA trom a breast tumour cDNA library library

The invention relates to an isolated breast tumour polynucleotide and the polypeptide it encodes. The polynucleotide and polypeptide are useful for detecting the presence of breast cancer in a patient, and in pharmaccutical compositions for treating breast cancer. The sequences are useful for stimulating an immune response in a patient and can therefore be used in production of vaccines. The sequences are also useful for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with that hybridizes to the sample. This sequence represents a human breast tumour polypeptide of the invention

//octe="Organ: pooled; Vector: pT7T3D-Pac (Pharmacia) with
a modified polylinker; Site 1: Not I; Site 2: Eco RI;
Equal amounts of plasmid DNA from three normalized
libraries (fetal lung NbHL19W, testis NHT, and B-cell
NCI CGAP GCBI) were mixed, and so circles were made in
vitro. Following HAP purification, this DNA was used as
tracer in a subtractive hybridization reaction. The driver
was PCR-amplified cDNAs from pools of 5,000 clones made
from the same 3 libraries. The pools consisted of
I.M.A.G.E. clones 297480-302087, 682632-687239,
726408-728711, and 729096-731399. Subtraction by Bento
Soares and M. Fatima Bonaldo. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Neuherberg, GERMANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by BMFZ (Biomedical Research Center at the
Heinrich-Heine-University, Duesseldorf/Germany) within the cDNA
sequencing consortium of the German Genome Project. This clone
(DKFZP)81D1722) is available at the RZPD Deutsches
Ressourcenzentrum fuer Genomforschung GmbH in Berlin, Germany.
Please contect RZPD for ordering:

Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s. wiemann@dkfz-heidelberg.de;
sequenced by DKPZ (German Cancer Research Center,
Heidelberg/Germany) within the cDNA sequencing consortium of the
German Genome Project. This clone (DKFZP434A171) is available at
the RZPD Deutsches Ressourcenzentrum fuer Genomforschung GmbH in
Berlin, Germany. Please contact RZPD for ordering:
http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKFZp434A171
Further information about the clone and the sequencing project is

/note="Torgan: Brain; Vector: pYX- Asc; Site_1: BCOR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand CDNA synthesis was primed with oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCCAGACAG. This library was created for the University
lows Brain Anatomy Project (BMAP): "Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Haalth (NIMH), Hemin Chin, Ph.D.,
program coordinator."

/note="Organ: Head, Vector: pYX-Asc; Site 1: EcoR I;
Site 2: Not I; The library was constructed according
Bonnido, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel.First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor digested with NotI and then cloned
directionally into pXx-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CGAACTGAAT. This library was created for the University
Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH)."

ALIGNMENTS

a used BS322-specific polynucleotides, polypeptides and antibodies, used in the detection and diagnosis of breast disease especially breast cancer. The present sequence represents an antigenic peptide derived from human BS322 polypeptide. The peptide is used to raise antibodies. BS322 is a breast tissue marker. The BS322 polymucleotides and polypeptides are use to detect and diagnose breast disease, e.g. breast cancer. The BS322 polymucleotides are useful as a source of probes and primers, and the BS322 polypeptides are useful as antigens Amino acid sequence of an antigenic peptide from BS322 polypeptide. ```
represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CARP) respectively.

AAB63332 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP artibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human prostate cancer associated antigen protein sequence SEQ ID NO:1288.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively. AAB63467, AAB63467, AAB63422 to AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
                                                                                                                                                                                                                                                            Human prostate cancer associated antigen protein sequence SEQ ID NO:1271.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human prostate cancer associated antigen protein sequence SEQ ID NO:1268.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.

AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively.

AAB62232 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively.

AAB631212 to AAB63467, AAB63468 to AAB63701 and AAB63722 to AAB63370.

represent human breast, gastric and prostate CAAP protein sequence respectively. CAAP6 have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human prostate cancer associated antigen protein sequence SEQ ID NO:1291.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.

                                                                                                                                                                                                                                                                                                                           AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively.

AAB63232 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human prostate cancer associated antigen protein sequence SEQ ID NO:1295.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.
                                                                                                                                                                    Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.

represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively. Prostate cancer associated antigen precursors (CAAP) respectively. AAB63123 to AAB63467, AAB63468 to AAB63121 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human prostate cancer associated antigen protein sequence SEQ ID NO:1279.
                                   Human prostate cancer associated antigen protein sequence SEQ ID NO:1299.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.
                                                                           Human, breast cancer; gastric cancer; prostate cancer; diagnosis; cancer associated antigen; cytostatic; cancer vaccine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively.
AAB63232 to AAB63467, AAB63468 to AAB63722 and AAB63722 to AAB63970 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
                                                                                                                                                                                                                                                                                                                           Human prostate cancer associated antigen protein sequence SEQ ID NO:1280.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gastric and prostate cancer associated diagnosing and treating a condition an abnormal amount of a protein, e.g.

AAF22422 to AAF22656, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precureors (CAAP) respectively. AAB63122 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63467, AAB63467 to AAB63721 and AAB63722 to AAB63467, Gastric and prostate CAAP protein sequence respectively. CAAPE have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,

                                                                                                                                                                                                                                                                                                                                                                                                represent nuclectide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively. AAB631461 to AAB63122 to AAB63122 to AAB63122 to AAB63122 to AAB63172 to are respectively. Gastric and prostate CAAP protein sequence respectively. CAAPs have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human prostate cancer associated antigen protein sequence SEQ ID NO:1265.
                                                                                                                                                                                                                     Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAF22422 to AAF22626, AAF22627 to AAF22773 and AAF22774 to AAF23014 represent nucleotide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively. AAB63461, AAB63462 to AAB63722 to AAB63722 to AAB63701 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAPS have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
                                                                                                                                                                                                                                                                                                            Human prostate cancer associated antigen protein sequence SEQ ID NO:1287.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding breast, gastric and prostate cancer associated antigen precursors, useful for diagnosing and treating a condition characterized by expression of an abnormal amount of a protein, e.g.

                                                                                                                                                                                                                                                                                                                                                                                     represent nuclectide sequences encoding human breast, gastric and prostate cancer associated antigen precursors (CAAP) respectively.

AAB63232 to AAB63467, AAB63468 to AAB63721 and AAB63722 to AAB63770 represent human breast, gastric and prostate CAAP protein sequence respectively. CAAP8 have cytostatic activity and can be used in the production of cancer vaccines. The human CAAP proteins, peptides, nucleic acids or anti-CAAP antibodies are useful for diagnosing and treating a condition characterised by expression of an abnormal amount of a protein,
prostate cancer associated antigen protein sequence SEQ ID NO:1261.

BS322 is a breast tissue marker. The BS322 polynucleotides and polypeptides are used to detect and diagnose breast disease, e.g. breast cancer. The BS322 polynucleotides are useful as a source of probes and primers, and the BS322 polypeptides are useful as antigens
                                                                                                                                                                                          BS322-specific polynucleotides, polypeptides and antibodies, used in the detection and diagnosis of breast disease especially breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

C; Species: Caenorhabditis elegans
C; Species: Caenorhabditis elegans
C; Species: 29-oct-1999 #sequence_revision 29-oct-1999 #text_change 09-Jul-2004
C; Accession: T33483
R; Chissoe, S: Hawkins, J.
Submitted to the EMBL Data Library, September 1997
A; Description: The sequence of C. elegans cosmid F52H2.
A; Reference number: 221175
A; Accession: T3483
A; Accession: T3483
A; Residues: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: DNA
A; Residues: 1-678 <CHI>A; Residues: 1-678 <CHI>A; Residues: 1-678 <CHI>A; Residues: 1-678 <CHI

S51866
HPR1 protein - yeast (Saccharomyces crevisiae)
N;Alternate names: protein YD9302.14; protein YDR138w
C;Species: Saccharomyces cerevisiae
C;Species: Saccharomyces cerevisiae
C;Species: Saccharomyces cerevisiae
C;Date: 05-May-1995
R*01iver, N: Natris, Data Library, February 1995
R;Oliver, K: Harris, Data Library, February 1995
A;Reference number: S51865
A;Molecule type: DNA
A;Resference number: S51853
A;Accession: S51866
A;Molecule type: DNA
